# **ENCASA 96 FIBRE DISTRIBUTION POINT**

#### **PRODUCT OVERVIEW**

The Encasa range of fibre distribution points have been designed to fit within the FTTx network. These enclosures can be aerial, or wall mounted. Made from 100% virgin UL94-V0 rated material, UV stable and are IP56 rated, allowing them to be used in both internal and external applications.

This Encasa fibre distribution point accommodates 96 fibres (using LC connections) or 48 fibres (using SC connections). Flexibility is increased through the option to use the enclosure for traditional splicing of cables with a capacity of 192 fibres and the installation of pre-terminated cables via the 120 split gland cable exit points 96 on the top and bottom of the enclosure that accept both flat and round cable.

The use of splitters is also possible with mounting positions for up to 24 units found under the splice trays.

Each enclosure comes pre-loaded with APC adaptors and splitters. The splitters are terminated with APC connections on the outgoing end and unterminated on the incoming end as standard. Options are available to have adaptors and standard pigtails or loaded with adaptors only.

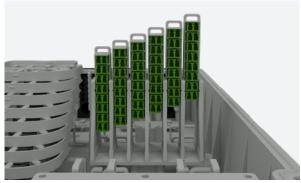

The adaptor field has been designed so each stack of adaptors can be pulled up to allow better access to plug and unplug connections.

The cable entry points allow for midspan cable installation and for cable to be passed through to feed further enclosures in the network.

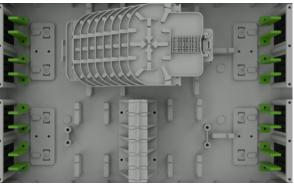

Integrated fibre management allows 250µm and 900µm fibre to be installed, keeping the fibres safe and always maintaining the required bend radius.
